PROFILE

Master of Data Science candidate at the University of Sydney focused on AI applications and agent products, with hands-on experience across AI + GIS, intelligent experimentation platforms, AI workflows, and 0-to-1 product development. Experienced in AI use-case decomposition, requirements analysis, solution design, A/B testing, and KPI frameworks, as well as agent task orchestration, tool calling, context management, failure recovery, and human-in-the-loop product design. Uses SQL and Python for data analysis and collaborates with engineering to drive AI products from requirements definition and solution design through launch and validation.

EDUCATION

The University of Sydney | Master of Data Science | QS Top 25 Nov 2024 - Dec 2026

Hebei University of Science and Technology | B.Eng. in Communication Engineering | GPA: 3.58/4.00, Top 5% Aug 2020 - Jun 2024

SKILLS & RECOGNITION

AI Applications: ChatGPT, Claude, Gemini, Cursor; agent workflows, tool calling, context management, human-in-the-loop systems, and failure recovery; AI-assisted requirements analysis, solution design, code comprehension, and product iteration

Product: Requirements analysis, user research, competitive analysis, PRDs, Figma / Axure prototyping, A/B testing, product testing, and cross-functional delivery

Data Analysis: Excel, SQL, Python, R, Tableau, data cleaning, funnel analysis, and KPI monitoring

Languages: Mandarin (native); English (IELTS 6.5, Reading 7.5) - proficient in English-language research, cross-cultural communication, and international collaboration

Awards: Provincial First Prize, National College Student Advertising Art Competition (2023); University Second-Class Scholarship (2021-22); University Third-Class Scholarship and Outstanding Class Leader (2022-23)

PROFESSIONAL EXPERIENCE

Axi Technology (Raizz) | Product Growth Intern | Shenzhen Jul 2026 - Present

Own AI-assisted content workflows, web publishing, and search-growth operations for Raizz, a consumer sleep-technology brand, while supporting international growth and competitive ecosystem research.

- AI Content & Publishing Workflow:** Owned and continuously iterated Raizz's end-to-end SEO/GEO content workflow, spanning keyword and search-intent research, multi-model generation with ChatGPT, Claude and Gemini, human quality review, HTML checks, image and alt-text configuration, sitemap updates, and GitHub submissions. Produced **25 new articles, optimized 16 existing pieces, and supported the launch or update of 50 articles and 12 website pages**.
- Search Monitoring & Issue Resolution:** Owned Google Search Console monitoring across content discovery, crawling, indexing, and canonical signals, diagnosing issues through internal linking, resource paths, caching, and release workflows. Helped resolve **12 indexing or web-page issues**, establishing a closed-loop process from content production and publishing to monitoring, diagnosis, and iterative optimization.
- Growth Channel & Competitive Research:** Benchmarked creator, guest-post, PR, and media ecosystems across sleep-tech brands including Whoop, Hatch, Withings, and SleepScore; developed screening criteria covering content relevance, engagement quality, prior partnerships, site quality, and brand fit. Evaluated **85+ creators and 34+ websites/media outlets, shortlisting 13 high-fit opportunities** for further outreach.

Beijing De'an IoT Technology Co., Ltd. | Product Intern, AI / GIS | Beijing Jun 2025 - Aug 2025

- Product Discovery & Problem Definition:** Analyzed the advertising-to-landing-page conversion journey for the GIS platform and benchmarked **5 competing products**, including Google Maps and Amap Open Platform. Identified key drop-off drivers across interaction feedback, page performance, information density, and conversion guidance, and translated findings into a prioritized product improvement backlog.
- Solution Design & Product Delivery:** Designed improvements across ad interaction feedback, landing-page information architecture, and conversion guidance, prioritizing initiatives based on expected business impact and implementation complexity. Worked with product, engineering, and business stakeholders through requirements review, implementation, testing, and launch.
- Data Validation & Iteration:** Built a KPI framework covering **CTR, CVR, and bounce rate**, and combined user-behavior analysis with usability testing to evaluate product changes and identify remaining friction points. The resulting iterations increased **CTR by 15% and CVR by 12%**.
- AI + GIS Product Strategy:** Researched GeoAI, spatial-data analytics, map visualization, and decision-support use cases, translating user needs and SuperMap platform capabilities into AI application scenarios, product workflows, and feature recommendations for intelligent GIS product development.

PROJECTS

Social Media Survey Platform with Webcam-Calibrated Attention Tracking Feb 2026 - Jun 2026

Product Owner | Sydney | Client-commissioned, live product

- Owned the researcher workflow from experiment setup, content configuration, and A/B assignment through publication, participation, analysis, and export; defined preview/live data separation, participation states, and completion validation.
- Designed random assignment, six-language delivery, and browser-based attention tracking; translated webcam calibration, click, and gaze data into attention-confidence and calibration-quality metrics while defining a no-video-storage privacy boundary.
- Decomposed complex requirements into executable tasks, coordinated a 5+ person team across front-end, back-end, and tracking modules, and contributed to the Next.js/React participant calibration experience.
- Established completion, required-response, and low-quality-session rules so exported behavioural and attention data could be used directly in research analysis.

Flash Man - Sydney Local Errand App Mar 2025 - Sep 2025

Product Lead | Sydney

Designed a 0-to-1 local errand product and introduced an AI agent for order understanding, task orchestration, and fulfilment exception handling, creating an intelligent execution workflow for real-world service operations.

- Agent Product Design:** Designed an **Intent Parsing → Task Decomposition → Tool Calling → State Update** workflow for natural-language ordering, dispatch, substitutions, address changes, and timeout scenarios; used the order state machine to define context, task boundaries, and execution rules.
- Reliability & Safety:** Designed exception detection, failure recovery, duplicate-execution safeguards, and **human-in-the-loop** controls, requiring manual confirmation for low-confidence, high-risk, and irreversible actions to keep agent decisions aligned with fulfilment rules.
- Business Validation:** Completed approximately **60-100 trial orders**, achieving an **88%-92% on-time rate, a 5%-8% cancellation rate**, and a **complaint rate below 4%**; iterated agent workflows and business rules using real orders and exception cases.
